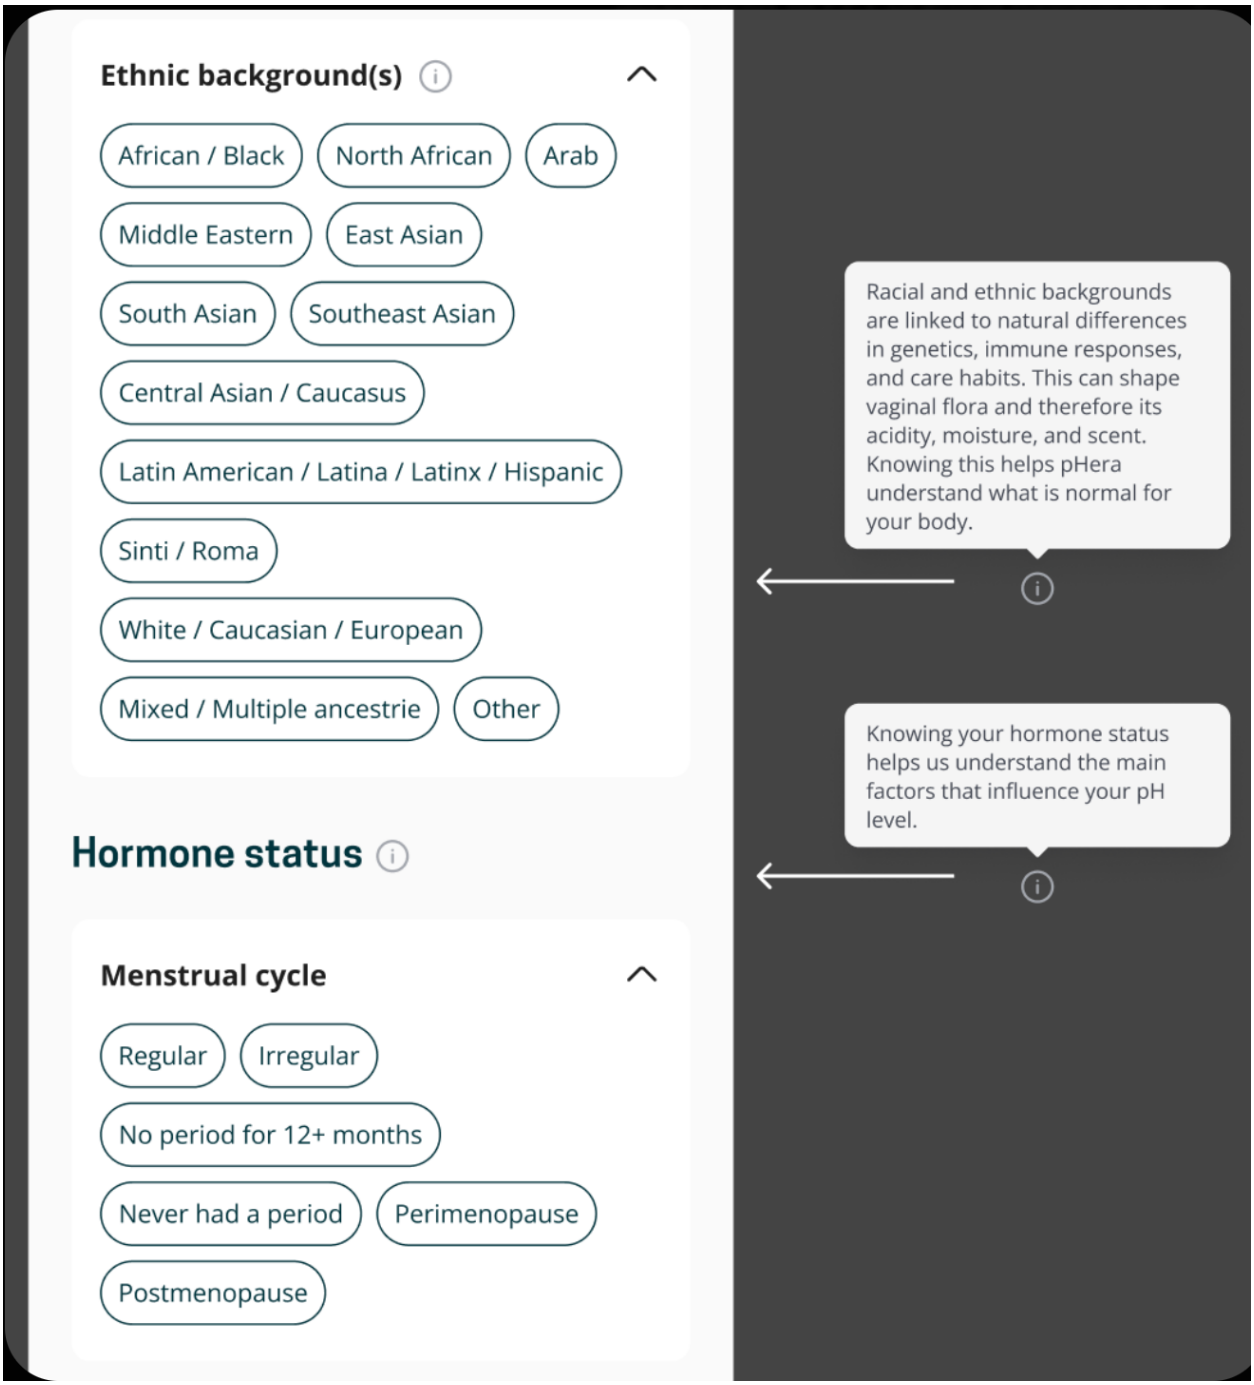
Age
Enter your age
It is normal for vaginal pH to change with age, because of how hormones work at different life stages. Such shifts can slightly affect natural self-lubrication and odor.

## Diagnoses related to hormones

- Adenomyosis
- Amenorrhea
- Cushing's syndrome
- Diabetes
- Endometriosis
- Intersex status
- Thyroid disorder
- Uterine fibroids
- Polycystic ovary syndrome (PCOS)
- Premature ovarian insufficiency (POI)



Ethnic background(s)
African / Black
North African
Arab
Middle Eastern
East Asian
South Asian
Southeast Asian
Central Asian / Caucasus
Latin American / Latina / Latinx / Hispanic
Sinti / Roma
White / Caucasian / European
Mixed / Multiple ancestrie
Other
Racial and ethnic backgrounds are linked to natural differences in genetics, immune responses, and care habits. This can shape vaginal flora and therefore its acidity, moisture, and scent. Knowing this helps pHera understand what is normal for your body.
Hormone status
Knowing your hormone status helps us understand the main factors that influence your pH level.
Menstrual cycle
Regular
Irregular
No period for 12+ months
Never had a period
Perimenopause
Postmenopause

## Birth control

- ○ No birth control or hormonal birth control
- ○ Stopped birth control in the last 3 months
- ○ Morning after-pill / emergency contraception in the last 7 days

**Pill:**

- ○ Combined pill
- ○ Progestin-only pill

**IUD:**

- ○ Hormonal IUD
- ○ Copper IUD

**Other hormonal methods:**

- ○ Contraceptive implant
- ○ Contraceptive injection
- ○ Vaginal ring
- ○ Patch

**Permanent methods:**

- ○ Tubal ligation

## Hormone therapy

- Estrogen only
- Estrogen + progestin

**Hormone replacement therapy (HRT):**

Testosterone | Estrogen blocker | Puberty blocker

## Fertility journey

**Current status:**

- I am pregnant
- I had a baby (last 12 months)
- I am not able to get pregnant
- I am trying to conceive

**Fertility treatments (last 3 months)**

Ovulation induction | Intrauterine insemination (IUI) | In vitro fertilisation (IVF) | Egg freezing stimulation | Luteal progesterone

## Symptoms

### Discharge

No discharge | Creamy | Sticky | Egg white | Clumpy white | Grey and watery | Yellow / Green | Red / Brown

Discharge varies from person to person. It is influenced by your cycle, hygiene products, medications, stress, and a lot of other factors. Look out for discharge of unusual colour and texture.

### Vulva & Vagina

Dry | Itchy

It is normal to experience occasional dryness or itchiness - after shaving, using a new hygiene product, or wearing tight clothes. If such sensations become uncomfortable and appear along with other symptoms, they may signal an infection.

### Smell

Strong and unpleasant ("fishy") | Sour | Chemical-like | Very strong or rotten

A healthy vagina can have a natural scent that is metallic, musky, earthy, or tangy - all of these are normal! If you notice any of the unusual odors, such as those listed below, it might be helpful to mention them to your clinician.

### Urine

Frequent urination | Burning sensation

It is normal to urinate more often after drinking more fluids, coffee, or during periods of stress. A brief burning sensation can happen after using a new product or after sex. If such sensations last a long time or appear with other symptoms, they may signal an infection.

### Notes
